PROFESSIONAL EXPERIENCE

System Engineer (Java Full Stack Developer) | Infosys, Pune

Nov 2022 – Dec 2024

1. Client: Infosys

Project Name: Infy-Bank

Project Description: This project focuses on developing a secure and efficient digital banking web application to streamline customer interactions and banking operations. Users can perform online transactions, manage accounts, and access financial tools. The application will be built with Java Spring Boot (backend), MySQL (database), and Angular for a seamless user experience. RESTful APIs will facilitate smooth communication between systems, with JSON Server used for rapid testing and iteration.

Technologies: Java, SpringBoot, RestAPI, MySQL, Angular, JSON Server.

Duties and Operational Responsibilities: Worked as Full Stack developer, Performed High-Level and Low-Level Design and Requirement Analysis, proactive project assistance throughout the go-lives and test cycles Worked mostly on performance tuning, optimization, code enhancement, and code repair.

2. Client: Infosys

Project Name: Infosys Angular PolyCloud Services

Project Description: Developed a Corporate Communications Department (CCD) page to centralize organizational communications ,ensuring seamless dissemination of news, updates and media. Developed a media gallery for hosting and showcasing corporate photos, videos and documents in an intuitive grid layout. Improved employee communication and engagement by centralizing resources on a single platform.

Technologies: Angular, JSON Server, BootStrap, Git Hub.

Duties and Operational Responsibilities: Worked as Frontend developer, Involved in Requirement Analysis and High-Level and Low-Level Design, supported project during the test cycle and go-lives.
