Work Experience

Software Engineer 1, Parkar Digital

2024 Feb – present
Pune, India

- Orchestrated the application of Lazy Loading principles, leading to a 30% increase in average session duration as users experienced faster content loading, directly contributing to better user engagement and retention.
- Upgraded an old application to a modern MERN Stack application by refactoring code, enhancing features, and improving performance.
- Improved the project's performance in Node.js by optimizing API responses and load balancing, implementing efficient data handling, reducing latency and enhancing scalability.

Software Development Engineering Intern, Thinkseed Systems

2023 Jun – 2023 Dec
Bangalore, India

- Implemented Encryption/Decryption modules in the existing Spring boot application for the vehicle data using cryptographic Algorithms.
- Optimized the API response time by implementing caching, query optimization, and efficient data processing techniques.
- Implemented load balancing to distribute traffic evenly across servers, ensuring high availability and scalability.

Projects

"Resumatic: AI-Powered Resume Builder with ATS Optimization" [🔗](#)

- Resumatic: An AI Resume Builder with ATS is a smart web application that allows users to create professional, optimized resumes.
- Leveraging React + Vite for a fast and responsive frontend and NestJS with MySQL for secure backend management,
- The platform uses Machine Learning and Natural Language Processing (NLP) to analyze resumes for (ATS). This ensures users resumes are tailored to job descriptions.

"An Expense Tracker website made using NestJS and ReactJS." [🔗](#)

- A System designed to track the daily expenses of a user.
- User will be able track it's expenses, set monthly budget, visualize the expenses category wise, and generate daily/weekly reports for the expenses.
- The backend of this system is developed using NestJS Framework and UI is designed using ReactJS.

"An AI Chatbot developed using MERN-Stack and OPENAI API" [🔗](#)

- This is an AI Chatbot application, inspired by ChatGPT, by using MERN Stack and OpenAI.
- Its a customized chatbot where each message of the user is stored in DB and can be retrieved and deleted.
- Its a completely secure application using JWT Tokens, HTTP-Only Cookies, Signed Cookies, Password Encryption, and Middleware Chains.

Skills

Programming Languages:

C, Java, Python, Javascript

Version Control

Git, Github, Bitbucket

Database

MySQL, MongoDB, PostgreSQL

Development Environment

Spring Tool Suite, Visual Studio, Android Studio, PyCharm

Core CS Subjects

DBMS, Operating Systems, Computer Networks, DSA

Backend:

ExpressJS, NodeJS, NestJS, NextJS, Spring Boot

Frontend:

HTML, CSS, ReactJS

Testing

Junit Testing, Integration Testing

Education

Masters of Technology in Computer Science and Engineering, National Institute of Technology Goa

Completed Mtech with 7.55 CGPA.

2024
Goa, India

Bachelors of Engineering in Computer Science and Engineering, Trinity Academy of Engineering

Completed B.E. with 8.52 CGPA

2022
Pune, India

Certifications and Coding Profiles

Artificial Intelligence A-Z 2024: Build 7 AI + LLM & ChatGPT

- Gained hands-on experience building AI models, including Large Language Models (LLMs) and ChatGPT.
- Learned practical AI techniques like natural language processing, neural networks, and chatbot development.

Github: [🔗](#)

Leetcode: [🔗](#)

GeeksForGeeks: [🔗](#)

Achievements

- Have secured first place in Social Application domain in National level event named Ideathon
- Secured AIR 1375 in Gate 2022
