| 2014 | <b>SSC board</b><br>80.20%                                  |

## PROJECT

**StoxAlert**  
I have been working on this project from scratch. I have explored a majority of the sectors, including frontend, backend, ChatGPT(3, 3.5, 4, 4o-mini models), database, API creation, API integration, and analyzing useful data on Excel.

**WhatsApp Chat AI**  
In this project, we have developed an AI-powered WhatsApp Chat Support system that enables users to resolve their queries within a minute. Additionally, we have integrated advanced features such as voice chat, and we are currently working on image integration. Our development utilized ChatGPT-3, 3.5 turbo, and 4 models.

**SleepNumber**  
Likewise SleepWell in India, SleepNumber is in the US. It was based on the Agile model, and my contribution focused on frontend development, which was written in XML format. The tools I have used include Android Studio, Figma, Teams, Barcode Scanner, and Git.

## **ADDITIONAL INFORMATION**

I am enhancing my skills in the development sector, where I have learned basic JavaScript and completed a self-initiated mini-project using React.js, JavaScript, HTML, and CSS. Additionally, I am updating my skills in NoCode/LowCode platforms such as Bubble.io and Webflow.
