LinkedIn: Rahul Gohil

Rahul Gohil excels in problem-solving, communication and teamwork, with a strong focus on creating user-centred solutions and a keen attention to detail. His passion for staying ahead of industry trends drives him to deliver innovative and effective solutions. Eager to expand his expertise, he's dedicated to becoming a full stack developer and continually enhancing skills.

Work Experience

Teknopoint | June 2022 – Present

Role – Front End Developer

Teknopoint specializes in insurance and financial projects, utilizing a range of technologies. The company excels in developing innovative systems that address the unique needs of the financial sector.

Project1 – Kotak Website: <https://www.kotak.com/en/home.html>

Kotak offers banking products and financial services for corporate and retail customers in the areas of personal finance, investment banking, life insurance, and wealth management.

Role and Responsibilities:

- Overhauled the website header and its overall design, enhancing user interface and navigation for a more intuitive and modern experience.
- Improved site performance by implementing component-based architecture, optimizing load times and scalability.
- Refactored and removed redundant or unnecessary code, streamlining the codebase for better maintainability and efficiency.
- Identified and resolved existing bugs, ensuring a more stable and reliable user experience across all platforms.

Project2 – ICICI Prudential

ICICI Prudential provides various life insurance products, offers investment solutions through mutual funds, catering to individuals who are looking to grow their wealth.

Role and Responsibilities:

- Designed and developed responsive user interfaces based on Figma designs, ensuring a seamless and visually appealing user experience across devices.
- Integrated third-party APIs into the frontend, enabling dynamic data retrieval and improving overall functionality of the application
- Enhanced code performance by optimizing algorithms, reducing load times, and improving the efficiency of frontend operations.
- Collaborated with clients to gather and analyse requirements, translating business needs into technical solutions to deliver high-quality applications.

Project3- Tata Capital Customer Portal: <https://retailonline.tatacapital.com/#/login>

Tata Capital's customer portal is an online platform offering seamless access to financial information. It enables users to view certificates, track EMI dues, interact with a chatbot for queries etc. Additionally, the portal provides access to customer services related to loans.

Role and Responsibilities:

- Crafting reusable components to ensure code efficiency and consistency across applications.
- Creating a seamless handshake between the frontend and backend via API integration, offering smooth and efficient data exchange and functionality throughout the application.

- Implement necessary business logic. This comprises state management, event handling etc.
- Writing and styling web content using HTML and CSS to achieve precise design and layout objectives.
- Developing React shells by referencing Figma designs to enhance user experience, ensuring a pixel-perfect implementation of design specifications.

Goldenmace IT Solutions | December 2020 – May 2022

Role - Frontend Developer Intern

Goldenmace IT Solutions is a product-based firm that specializes in developing and offering dashboard templates in a range of frameworks & libraries, as well as providing complete customer support.

Project1 - Hope Ui Pro: <https://templates.iqonic.design/hope-ui/pro/react/dashboard>

Hope UI Pro is a dashboard template that enables users to access and adapt the interface according to their unique needs.

Roles and Responsibilities:

- Assigned tasks to team members based on project requirements, ensuring effective resource utilization and timely delivery.
- Conducted thorough code reviews, providing feedback and reworking solutions to ensure adherence to quality standards and best practices.
- Designed, developed, and provided training to junior developers, fostering skill growth and ensuring project alignment.
- Led the process of building, testing, and deploying applications to production, ensuring smooth releases and minimal downtime.

Skills

Technical Skills: Vanilla js, React js, Redux, React Router, Typescript, Jest, Vue js, Handlebars, Gulp, Webpack, Node js, Express js.

Designing Skills: HTML, CSS, SCSS, Bootstrap, Tailwind

Project Management: Proof hub, Gitlab. GitHub

Education

- **Bachelor Of Engineering – Information Technology | 2016 -2019**
Universal College of Engineering - Mumbai University
- **Diploma – Computer Science | 2013 - 2016**
Pravin Patil College- Mumbai University

Awards and Honours:

Quick Learner Award

Learning Multiple languages at a time and consistently contributing to the projects.

Personal Projects:

Project1 - Intranet

Intranet has features for managing user roles, publishing articles and announcements, and allowing users to interact with content by liking, disliking, and filtering posts based on preferences. It has personalized content filtering and interaction capabilities to improve user engagement and streamline internal communication.

Roles and Responsibilities:

- Development using React, TypeScript, SCSS, and Redux, ensuring a dynamic user experience.
- Utilized Webpack for module bundling, eslint for code linting, and Jest for unit testing to maintain code quality and reliability
- Implemented custom stylesheets to create a unique, branded design, enhancing the overall visual appeal and usability of the application.
