SUMMARY

Frontend developer with a strong foundation in React and Angular, passionate about building scalable, performant, and user-centric web applications. Known for translating Figma designs into efficient UI components and accelerating delivery using modern tools and AI. Eager to contribute to impactful products that reach millions.

EXPERIENCE

SDE-1

Valuefy

July 2023 – Present, Mumbai, Maharashtra (Remote)

- Developed and maintained scalable web applications using both **ReactJS** and **Angular** frameworks. Leveraged modern component-based architecture, routing, state management, and API integration to build performant and maintainable UIs.
- **Built 20+ reusable UI components** (e.g., modals, dropdowns, date pickers, paginators) across projects, improving design consistency and reducing development time by ~25% for repetitive features.
- Migrated a 3+ year-old React Native mobile app to a **fully responsive ReactJS web application** within a year. Ensured UI/UX and functional parity with Figma designs and mobile flows, reducing integration and QA efforts by 40%.
- Implemented **performance optimizations** including **lazy loading**, modular code structuring, and shared component libraries—enhancing application speed and long-term maintainability.
- Utilized **route guards** and **custom directives** in Angular to enhance security and reusability in enterprise-level applications.
- Enhanced development workflow by integrating Windsurf and other **AI tools** to reduce manual effort in coding processes.

Front-end Intern

Relinns Technologies

January 2023 – June 2023, Mohali, Punjab

- Contributed to front-end development using **HTML, CSS, and React JS**, assisting in building **10+ responsive UI components**, which improved mobile usability and layout consistency across 3 screen sizes.
- Improved debugging proficiency by identifying and resolving **15+ layout and cross-browser issues**, reducing QA-reported UI bugs by ~30% during the development cycle.
- Participated in UI and multimedia tasks, including **editing 5+ internal demo videos**, gaining exposure to **UX design** and reinforcing platform-wide **visual consistency**.

PROJECT

Task Management Platform

Personal Project • task-manager-fe-dun.vercel.app/

- Built a **task management platform** using **ReactJS, Redux, Node.js, Express, and PostgreSQL (via Neon.tech)** to support manager-reportee task workflows.
- Implemented features allowing users to view **manager-reportee relationships**, track task assignments, and **edit task details** (title, description, assignee, etc.).
- Utilized **React Hooks** and Redux for efficient state management and UI responsiveness.
- **Future Scope** : Currently integrating **JWT-based authentication and Role-Based Access Control (RBAC)** for secure login/signup workflows and permission handling.

EDUCATION

BE Electronics & Computer Science

Thapar Institute of Engineering & Technology • Patiala, Punjab • June 2023

SKILLS

JavaScript, ReactJS, Angular, API Integration, Typescript, Redux, HTML, CSS, Responsive Design
