EDUCATION

B.Tech (Computer Science) - 7.69 CGPA

KIET GROUP OF INSTITUTIONS

📅 August 2018 - August 2022

PROJECTS

XSans (ReactJs Library)

[Link](#)

- Developed a **ReactJS component library** offering pre-built, reusable HTML elements with enhanced features for modern web development.
- Utilized **Tailwind CSS** to create visually appealing and responsive components, ensuring a consistent and minimal design system for users.
- Developed **dynamic CLI functionality** to streamline components installation based on user commands, offering flexibility in project setup and reducing memory usage.
- Published the library on **npm as an official package**, allowing users to install the entire library or specific components as per their requirements.
- Engineered the library with a **modular installation approach**, enabling developers to install individual components in specific folders rather than cluttering the node_modules directory.
- Built an **interactive website for Xsans** that showcases the library, component documentation, and installation instructions, helping users understand and preview the components in real time.

SnapBox (PhotoBooth)

[Link](#)

- Developed a photobooth **desktop application** using **React.js** with **Electron** for photobooth machine.
- Integrated webcam functionality to provide real-time camera feed and live preview for photo capture.
- Implemented **drag-and-drop feature** to allow users to place stickers on captured photos, enhancing customization and user experience.
- Integrated a **payment gateway**, enabling secure transactions for users to pay based on the selected photo frame.
- Developed **printing functionality** by integrating a printer, allowing users to send photo details directly from the machine for instant printing.
- Created a **SnapBox website** using React.js to showcase the photobooth features and marketing.
- Utilized **Tailwind CSS** for responsive and modern UI design, and **Shadcn** for advanced component styling elements.

WORK EXPERIENCE

Wipro | Frontend Developer

📅 May 2022 - Jan 2025

Project : PartnersFund

- Developed a **dynamic webpage creation tool** from scratch with **drag-and-drop functionality** for building single-page websites for fund management.
- Implemented **coordinates-based** element positioning to precisely manage and update element positions within the drop area.
- Created a **real-time preview** mode to visualize the web pages being built and instantly validate changes.
- Developed **entity and view object** configurations allow elements to interact with data from database.
- Built an **expression feature**, enabling users to create, edit, and delete expressions that define dynamic behaviors (e.g., conditional visibility of elements based on data).
- Integrated **Redux Toolkit** for state management and **Redux Thunk** with **Axios** for handling API calls.
- Leveraged **Tailwind CSS** for responsive design and various React libraries (such as **dnd-kit**, **shadcn**, **react-icons**) to enhance the user interface and overall experience.
- Collaborated closely with backend teams for seamless data integration using **REST APIs**.

Project : SIO Operations

- Migrated an existing account directory **Angular** application to **ReactJS**, modernizing the codebase and improving application performance and maintainability.
- Created features like **exporting** and **uploading data**, including **pre-validation** for Excel file imports, ensuring data integrity before submission.
- Implemented a **progress bar** to display and track the status of data uploads in real time.
- Handled millions of records, applying **pagination** on tables and optimizing frontend performance through **lazy loading**.
- Used **Redux Toolkit** and **Redux Thunk with Axios** to streamline state management, handle asynchronous API calls, and improve scalability and maintainability.
- Styled the application using **Tailwind CSS**, ensuring a responsive and visually appealing design.
- Collaborated with the UX team to develop and implement new design solutions, ensuring a user-centered approach and seamless integration with technical requirements.

TECHNICAL SKILLS

Languages : C, C++, HTML, CSS, JavaScript.

Frontend Technologies : ReactJs, Redux, Redux Toolkit, Shadcn, Electron, Tailwind CSS, Material UI, Bootstrap.

Tools : Git, GitHub, Jira, Postman, Swagger, Bitbucket, Figma, VS Code.

Database : MySQL, MongoDB

Operating System : Mac, Window.
