

MEHUL THANKI

Ahmedabad, Gujarat, India | +917600453177 | mehulthanki12@gmail.com |

<https://mehul-thanki.vercel.app/> | <https://github.com/mthanki/> | <https://www.linkedin.com/in/mehul-thanki/>

I'm a developer based in Ahmedabad with 3 years of experience in building apps. I strive to keep the code simple, so it's easy to read and allows for the least technical overhead. I have experience in mobile (React Native, Ionic) and web development (React, angular, Vue), I'm also proficient with Nodejs and databases (MongoDB) and have worked with them as well. I believe in working together and assisting my team members in doing their best.

EDUCATION

August 2021

Computer Application Development, Post Graduate Certificate | Conestoga College | GPA 3.8

August 2020

Software QA and Test Engineering, Post Graduate Certificate | Conestoga College | GPA 3.2

2018

Bachelor of Technology, Computer Engineering | GTU

SKILLS

- React.js, Angular, React Native, Vue.js, Next.js, HTML
- Nodejs, REST APIs, MongoDB, SQL, Token-based authentication
- ViTest, Storybook.js
- Git, NPM, YARN, Docker, Jest, Slack
- HTML/CSS/JS
- Linux and Mac OS

EXPERIENCE

10/2023 – 3/2024

Web Developer | Authentic8 | Remote

Be in-charge of the frontend app for new product being developed, work with the team to assess most feasible technology stack, provide feedback on best practises, incrementally put code for the prototype in place and provide input towards team goals.

Main skills used: Vue.js, Pinia, Vuex, Vanilla HTML/CSS/JS, Docker.

- Resolve bugs of legacy application and add new features as per requirement.
- Use Vue.js to develop 3 full prototypes with different UI libraries: Vuetify, Element Plus and Material.
- Develop main product front-end while collaborating with designers, product managers and other engineers.

10/2021 - 12/2022

Software Developer | **Tivix** | Remote

Work on Mobile and Web development, developing travel application using web-based mobile tech - React Native and coding for Web application using React.js, work on a variety of projects from individual clients to large companies.

Main skills used: React Native w/ Expo, React.js, react hooks, react router, Redux, TailWindCSS for styling UI, Docker, ViTest for testing, Sentry for monitoring, TypeScript, HTML/CSS, REST and Git source control.

- Develop Mobile application from scratch using React Native, work with engineers to set up tech stack, provide feedback on best toolset to use for the project.
- Implement Token Authentication, integrate Google APIs to add features of location search, fetch metadata such as images for searched locations from Google Maps API.
- Add Sentry for monitoring app crashes and bugs.
- Create Robust and complex UI form with multi-step form for user information with numeric, increment, checkbox, radio and text inputs over different pages using in-built Context/Reducer API for state management removing dependency on external libraries.
- Work on existing project to implement frontend with React.js and Tailwind CSS as per provided designs.
- Write unit tests using ViTest to cover critical test cases and use StoryBook.js for visual testing.
- Integration test GraphQL with React Native.

5/2018 - 12/2019

Jr. Software Engineer | **Solutions Analysts** | India

Work as a MEAN stack developer to contribute to enterprise projects and develop smaller MEAN stack projects from scratch, add to APIs of backend codebase using Nodejs and MongoDB/SQL, be available to learn frameworks as needed such as Ionic and ReactJS and develop new applications from scratch putting best practices in place.

Main skills used: Angular, Nodejs, MongoDB, SQL, Express.js, MaterialUI for styling UI, HTML/CSS/REST and Git for source control.

- Contribute to the front end of an enterprise application built using M.E.A.N(MongoDB, ExpressJS, Angular, Nodejs) Stack, participate in weekly client release cycles to fix bugs and complete tasks on time.
- Use component based architecture to minimize performance loss and improve overall app architecture by conducting performance analysis with tools such as lighthouse and research.
- Implement subscription based access tiers in front end, and manage authentication state of the app.
- Use MixPanel to track analysis data.
- Implement YouTube API for watch time tracking.
- Design a new addon to an enterprise application using Angular, ensure consistency with the main app and work with designers to resolve UI issues and consistency of features such a common login.
- Implement various CRUD based features in Angular frontend such as managing events, tickets and invites.
- Create an Angular PWA app with mobile as target and offline functionality allowing for complex form input.
- Add features to existing Nodejs Socket based REST Api for a location sharing mobile application
- Implement Friend Request features on the backend of a REST API using Nodejs and MongoDB

PROJECTS

Vault – MEAN Stack

A complete Web app where you can sign up and store your code snippets in a VSCode like view, and search the snippets using #tags. Everything is stored in a Mongo Database.

Main skills used: Angular, Nodejs, Expressjs, MongoDB, Bootstrap for styling UI.

Frontend: <https://github.com/mthanki/vault-angular>

Backend: <https://github.com/mthanki/vault-nodejs>

Online Music Player – ReactJS

A React.js based music player that uses Context and reducer API for state management.

Main skills used: React.js, React context.
