Technical Skills

Languages: Javascript, Typescript, HTML5
Library: React.js, Redux, MUI, SASS, Formik, Styled Component
Framework: Next.js, Tailwind, Bootstrap
Platforms: VSCode, GIT

Experience

Software Engineer

Coditas

July 2022 – Present

Pune, India

Associate Software Engineer

Coditas

January 2022 – June 2022

Pune, India

Projects

Fashion Trends Analytics

March 2024 - Sept 2024

- This application provides analyzed market data to help designers identify and understand current fashion trends. It enables users to upload, view, and share related images.
- **Developed dynamic pages** rendering real-time data from STL.
- **Built reusable components** such as filters, dropdowns, image cards, and infinite scrolling features to enhance UI efficiency.
- **Collaborated cross-functionally** with back-end developers and product teams to ensure seamless integration and functionality.
- **Delivered clean, optimized code** aligned with industry best practices.

Hydrafacial

June 2023 - March 2024

- A platform designed to go beyond immediate cosmetic benefits, offering comprehensive solutions to support long-term skin health. Operates in 9 countries with localized versions tailored to native languages.
- Developed a comprehensive platform supporting login roles for providers, consumers, and hydrafacialists.
- Led the creation of a **turbo repository**, implementing robust localization for multiple regions.
- Gained expertise in building and packaging reusable components, publishing them on package managers such as **npm** and **Verdaccio**.
- Efficiently managed the consumer web app dashboard, presenting current and past treatment details using data from **Contentstack**.
- Built reusable, scalable components and crafted an interactive, responsive UI by leveraging **modular SCSS, mixins, Material-UI, Formik, Yup for form validation, and utilizing React hooks and context API**.

Medical Record Storing Database System

Dec 2022 - Mar2023

- Designed and developed a module to add, edit, and update patient and project details efficiently.
- Implemented a **tree data structure** to visually represent hierarchical relationships between patients and doctors, including subcategories for projects, utilizing **Material UI** and **Ant Design**.
- Enabled functionality to upload **DICOM** and **JPG** files for storing X-ray reports or other medical documents, with support for converting downloaded files into a human-readable format.
- Developed a responsive and interactive user interface using modular SCSS to ensure optimal user experience across devices.

Education

Galgotias College Of Engineering & Technology

Bachelor of Technology in Information Technology

Aug 2018 – Jun 2022

Uttar Pradesh
