Summary

Full Stack engineer with 2 years of experience in building end to end websites in technologies like React, Node, Next JS, TypeScript, JavaScript, MongoDB. Apart from full stack I have my interest in AI and Web3. I believe coding is a superpower to solve real-world problems using these skillsets.

EXPERIENCE

Capgemini Engineering

Feb'2023- Present, Pune

Associate Software Engineer (Full Stack developer):

CSV to Json formatter: Built a full stack web application which receives a .csv file and fetches the data in the frontend which is modifiable and stores the data into database after modification the data is downloadable in .csv and JSON format.

Technologies Used:

- Vite JS + React JS, Express JS, MongoDB on Node server.
- Using **Multer middleware** to receive file and then parsing the .csv file and converts into JSON using **papaparse** and then stores to **MongoDB** using **mongoose middleware**.
- The stored data is getting fetched to frontend using the fetch api and it provides edit and delete options. ○ After editing it gets stored the new value to the database
- Now there are two options for download one is in JSON format as it is and another is in .csv format ○ To download it into .csv format I used **JSON2CSV** middleware to convert the data from JSON to CSV

Chatbot: A full stack application, which works like ChatGPT, and can be used to make chatbot. Which answers any question of the users by fetching from the internet and also another feature is, if you provide a document, it will read it and answer smartly the users' question by fetching data from the document.

Technologies Used:

- React.JS, TypeScript, Express JS, Node server, Gemini API

LEADERSHIP

During my 3rd year of UG, I landed my first startup PuStalk which was an ecommerce based and I had a team of 5 men, and our startup achieved recognition among the top 500 startups in Slingshot Singapore.

PROJECTS

Ecommerce Full Stack: [\[Link\]](#)

A full stack server-side rendering ecommerce platform built using Next.js.

Technologies Used: Next.js + typescript + tailwind CSS, Zod (form validation), Google Oauth(signup/login), next-auth, Prisma, MongoDB, EdgeStore (cloud storage for images), Razorpay, NodeMailer.

Functionalities:

Admin endpoint: From here the admin can **upload**, **delete** and **edit** products and services also there is a dashboard and sales where all related data will be reflected.

User endpoint: Here the user can **login**, **surf**, **search** products and services contact the admin by submitting a form, **pay** and **buy**.

Rent Generator: [\[github\]](#)

A full stack website which calculates your monthly bill per user, with other details like rent, monthly electricity bill, water bill, deposits, due (if any), provides receipt.

Technologies Used: ViteJS + React JS, React-router-dom, Axios, Express JS, Prisma (ORM tool), MongoDB atlas, Postman (to test APIs).

Frontend for Brand: [\[Link\]](#)

A frontend website with animations built for a brand

Technologies Used: ReactJS, TypeScript, Tailwind CSS, React-router-dom

SKILLS

Languages JavaScript, C, C++, HTML, CSS, TypeScript

Tools Git, Postman, Docker, SSH

Frameworks React JS, Express JS, Next.js

Database MongoDB, SQL (Basics)

OS Linux (arch & Debian), Windows

Others Prisma (ORM tool), Multer, Three JS, Canon JS, Framer-motion, MUI, Tailwind CSS

Education

Bachelors' of Engineering in Electrical Engineering, University Institute of Technology, Burdwan

CGPA: 8.36 | 2022

Higher Secondary | Burdwan C.M.S High School, West Bengal

87.8% | 2018
