EXPERIENCE

ZENSAR TECHNOLOGIES (AUG 2022 -PRESENT) Software Engineer • Working as a Frontend Developer utilizing Angular, HTML, CSS, Bootstrap, Javascript and Typescript.. • Developed 50+ features and sub-features across two different projects I am working on. • Collaborated with the business, backend and testing team to meet end user requirements. • Played a key role in upgrading our web applications from Angular 8 to Angular 16, modernizing the tech stack. • Developed reusable components and efficient code as part of a low-code architecture design.	Mumbai, India
RELIANCE JIO (AUG 2021 -DEC 2021) Frontend Developer Intern • Worked as a frontend developer. • Designed and developed reusable web component templates, enhancing consistency across multiple projects. • Created 15+ responsive templates using HTML, CSS, and JavaScript. • Gained hands on experience in frontend development best practices, including clean code principles, responsive design and efficient debugging techniques.	Remote

PROJECTS

ZenFulcrum– Project and Resource Management • A comprehensive project and resource management platform. As a frontend developer, I utilized technologies like Angular, TypeScript, JavaScript, HTML, and CSS during my time working on it. ZenFulcrum enables efficient resource allocation and deallocation, project budgeting, and overall project lifecycle management, ensuring optimal utilization of resources and financial planning.
ZenAccurate– Pricing Platform of Projects • Designed and maintained ZenAccurate, a pricing system that enables clients to define project timelines, revenue estimates, workforce requirements, skill sets, and location preferences. It serves as a blueprint for project planning by optimizing resource allocation and financial forecasting.
Book Recommendation System (Final Year Project) • We developed a web based responsive application that recommends book using machine learning model and different web technologies with Django framework.
CMS Communication System (July 2021) • We designed an interactive and collaborative communication system for CMS Cash Management company using the Django framework in Python.
