Education

Surana College, Bangalore University

Bachelor in Business Management (CGPA: 7.05)

Nov,2020 - Aug,2023

Bengaluru, Karnataka

Technical Skills

Language: JavaScript

Frameworks: React.js, Express.js, Node.js, Tailwind CSS, Daisy UI

Database: Mongo DB

Others: Postman, Jira, Git, Github

Experience

ERP Systems - IAFD Solutions Pvt Ltd

Sept 2023 – Present

Web Developer

Pune, Maharashtra

- **Modules:** Vithoba Sales, Vithoba Inventory, Vithoba Distribution, Vithoba Admin Panel
- Enhanced a comprehensive ERP system for Vithoba, a leading FMCG company in Central India, managing over 10 lakh entries and supporting 600+ salespersons, 45 ASMs, and 600+ distributors catering to 110,000+ retailers.
- Engineered and optimized key modules using the MERN stack, including sales tracking, inventory management, billing, and distribution systems, ensuring seamless operations and improved user experience.
- Developed reusable UI components to ensure consistency and scalability across the application, improving development efficiency.
- Designed and implemented responsive user interfaces based on Figma designs, ensuring an optimal experience across devices.
- Consumed and integrated RESTful APIs, enabling seamless data flow and interaction between different modules.
- Designed RESTful APIs and microservices while applying design patterns to ensure maintainable, scalable, and reusable code architecture.
- Streamlined deployment processes by setting up CI/CD pipelines using Git, ensuring efficient and error-free application delivery.
- Utilized MongoDB for secure and efficient data storage and retrieval, ensuring data integrity and reliability across the ERP application.
- Collaborated in Agile sprints, working closely with cross-functional teams to gather requirements, deliver iterative solutions, and meet user needs effectively.
- Conducted thorough testing and validation, identified and resolved issues, and provided training and support to ensure smooth system adoption and high-quality deliverables.

Personal Projects

DevTinder | React.js, Node.js, Express.js, Mongo Db, Tailwind CSS, Daisy UI, Redux Toolkit

- Built a full-stack web application for connecting developers, integrating user authentication with endpoints for signup, login, and logout, and implementing profile management features for viewing and editing.
- Created connection request functionalities with statuses (ignored, interested, accepted, rejected) and built responsive frontend interfaces for real-time profile views and user feeds, ensuring seamless interactions and efficient data management.

NetFlix-Gpt | React.js, JavaScript, Tailwind CSS, Firebase, Redux Toolkit

- Developed a Netflix-inspired platform featuring personalized movie recommendations, user registration, and profile management using Firebase Auth and Redux Toolkit, while integrating the TMDB API for real-time movie data.
- Enhanced user experience with Gemini AI for tailored suggestions and optimized performance through memoization to minimize API redundancy.

My-YouTube | React.js, JavaScript, Tailwind CSS, Redux Toolkit

- Built a YouTube-like app with React and integrated YouTube API
- Implemented debouncing for search, cached results, and infinite nested comments.
- Added real-time live chat using API polling.
