Nationality: Indian

❖ CAREER OBJECTIVE

An ardent Frontend Developer with a fervor for meticulously crafting efficient and pioneering web applications. Skillful in interpreting client requisites into resilient, expandable, and intuitive solutions. Proficiency extends to the forefront of Web development technologies and paramount practices, underscored by a demonstrated history of punctually delivering top-tier Projects. Possessing robust aptitude for troubleshooting and an unwavering dedication to perpetual learning, thereby ensuring a steadfast position at the vanguard of web development trends.

❖ SKILLS

- **Programming Languages:** JavaScript – ES5 – ES6 |
- **Database:** MongoDB
- **Operating System:** Windows | Linux |
- **Version Control System:** Git – GitHub |
- **Tools:** Postman | Insomnia | Tenable
- **Development Technologies/Framework:** React | Rest API | Mongoose | JSON Web Token (JWT) | Bootstrap | Spline | Three.js | Tailwind CSS | HTML | CSS | Node.js | Material UI.

❖ WORK EXPERIENCE

*** Jio Platforms Limited (Full–Time)**

March 2023 – Present

Position: Cyber Security Engineer (Infrastructure Security)

Roles and Responsibilities:

1. Creating security automation tool's UI from scratch.
2. Developing Application architecture, workflow, database architecture
3. Planning the implementation of the applications which is fast, robust & scalable in nature.
4. Working on the implementation and mentoring junior developers to contribute in the same. (Front end creation with react.js)
5. Testing the created application to check if the functionalities are working properly or not.
6. Working on fixing bugs.

❖ MY PROJECTS

➤ Pre-Check Automation Tool

About: It is a web portal for internal use || File containing all the internal IPs can be uploaded || backend will segregate IP based on range and automatically initiate credentialed scan on sets of IP || The scan run in the backend from Tenable.sc || Scan status is monitored and result is fetched automatically || IPs on which credentials have worked are given a remark of "Worked" || Result can be downloaded from the portal itself in .csv format for sharing.

Technologies Used: React.Js, Tailwind CSS, Material UI, Spline.

➤ TVM (Threat & Vulnerability Management)

About: It is a Web Application || Both Tenable.sc and Tenable.io have been integrated in it || All the features that Tenable provides have been added in this portal || User can login with their credentials || All the displayed data is as per the user's organization || User can create, edit, delete, pause, resume and stop the scan || User can enter IPs to scan either one at a time or by uploading .txt file containing the list of IPs || Can status is monitored and updated on in the database || Scan result can be downloaded in .CSV Format.

Technologies Used: React.Js, Material UI.

➤ Task Management Portal

About: Developed an application for efficient management of daily tasks for team members, enabling users to input task details including start and end times. Implemented functionality for users to download task information directly into Excel sheets. Ensured privacy by allowing users to only access and modify their own individual tasks.

Technologies Used: React.Js.

➤ **Telco Security Certificate Repository Portal**

About: It is a web application that collects all the certificates of vendors, and stores it in a database and shows it whenever necessary.

Technologies Used: React.Js, Node.Js, MongoDB, Spline, Tailwind CSS, Material UI.

➤ **Jio Container Security (JCS)**

About: Developed a dashboard featuring function-specific tiles linked to dedicated components for streamlined navigation.

Created an Active Scan page showcasing running and completed scans for enhanced monitoring.

Implemented a business-oriented approach to display tailored data exclusively to respective organizational users.

Designed a Vulnerability Analysis Report feature to identify application vulnerabilities effectively.

Established registries for storing Docker images offered for scanning.

Deployed scanners to retrieve images from registries and conduct vulnerability scans.

Incorporated an Exception function for direct exemption of findings requiring omission.

Engineered a user-friendly interface ensuring seamless access across various portal components.

Technologies Used: React.Js, Material UI.

➤ **Telco VM Portal**

About: It is an application for automating the tedious and repetitive task of initial scan.

Technologies Used: React.Js, Material UI.

➤ **Jio Automated Email Engine**

About: It is an automated engine to publish latest threat advisories across organization and to notify the App/Domain/Business owner about their servers which are end-of-life or are end-of-support.

➤ **Jio Exploit Prediction Scoring System**

About: It is a scoring system specifically tailored for NIC (National Informatics Center) the partner of Government of India. It scores the CVEs (vulnerabilities) found after through scanning of their servers based on their technological environment.

➤ **Jio Server Detail Fetcher**

About: It is a portal which provides the user with the details of server's scan-zones and their respective data centers. This makes the tedious task of looking for the details while scanning the servers easy and streamlined.

 EDUCATION

➤ **Bachelor in Technology – B. Tech**
(Dehradun, Uttarakhand – India)

Aug 2019 – May 2023 (4 years)

- **Institute:** University of Petroleum & Energy Studies.

- **Stream:** Computer Science and Engineering with Specialization in Artificial Intelligence & Machine Learning.
