Experience

Tubelight Communications

July 2022 – Present

Associate Software Developer

Mumbai, MH

- Collaborated with the team to development of a large-scale CPAAS application focused on various communication channels such as SMS, RCS, Email, WhatsApp, and Voice.
- Created RCS (Rich Communication Services) feature, allowing clients to test the compatibility of contact numbers and send RCS template messages to thousands of customers.
- Created an analytics panel to display message statistics in both tabular and graphical formats, providing insights on total sent messages, failures, deliveries, and unread messages.
- Played a key role in developing the Global Reports feature for all communication channels within the cpaas platform. Gathered and presented comprehensive reports on communication metrics across multiple channels, providing valuable insights to clients.
- Implemented dynamic functionality to stick large table headers and columns based on client requirements.
- Implemented a feature to synchronize verbal conversations from uploaded audio clips into a chatbox in text format. Created graphical representations of voice sentiments, including abuse detection and word frequency analysis.
- Collaborated with team members using version control systems such as Git to organize modifications and assign tasks.
- Developed multiple websites from scratch using Reactjs and Styled Component. Integrated Sanity cms for blog content management. Created contact us form with OTP verification integrating APIs. Developed websites from scratch for Tubelight Communications, [inbox](#) and [Kahipay](#).

Projects

Profile Manager | Reactjs, Javascript, styled-components, Cloudinary api, Render

- Implemented CRUD operations using local storage for data persistence, ensuring efficient handling and management of user data across sessions.
- Integrated Cloudinary API for image upload and management, streamlining the process of uploading, storing, and retrieving user images.
- Fetches and displays user data from a provided JSON file, calculating user ages and implementing a gender dropdown for better user experience.
- Added robust edit and delete functionalities with validation. Deployed on Render: [Profile Manager - source code](#)

Employee Data App | Reactjs, Javascript, css, html, randomuser.me api

- Employee Data app stores information about employees. App users can easily know about any particular employee's information.
- This fetches data from randomuser.me API and stores it in the app and it's a responsive website.
- If small cards get clicked that cards detail data will show in the main card section, same for all small cards. Deployed [here](#) - [source code](#)

Dashboard App | Javascript, css, html, chart.js, Vs code

- Designed a beautiful Dashboard app, UI created using css's grid concept.
- Utilized charts.js for graph visualization. Hosted here: [Dashboard App - source code](#)
